Experience

Turing, Software Engineer | Remote

July '25 – Present

- Designed and delivered scalable software solutions across **frontend, backend, system design** and **data systems** while collaborating with global engineering teams.
- Worked on advanced **LLM-based systems** including integration, fine-tuning, prompt engineering, and applied **AI ML** techniques for production-grade use cases.
- Solved complex algorithmic and system-level problems in collaboration with **Codeforces, Alibaba, Tencent** focusing on performance, correctness, and scalability.
- Led and mentored **two engineering teams** by driving task planning, technical reviews, and cross-team collaboration to ensure high-quality and timely delivery.
- Implemented **DevOps, CI CD, automation, and scripting** using **Python** to streamline development workflows, deployments, and operational efficiency.
- Technology stack:** Python, Express.js, REST APIs, MongoDB, BigQuery, Docker, CI CD, GitHub Actions, React.js, Tailwind CSS, AWS GCP, System Design.

SpurBz, Backend Developer | Remote

March '25 – April '25

- Built the **backend** of an ATS platform to manage job postings and hiring workflows across clients. Developed **RESTful APIs** for Success Dashboard modules like Candidates, Jobs, Clients and Reports.
- Revamped **15+** complex database queries utilizing indexing and query optimization, accelerating API response times by **50 %** and alleviating server load by **20 %**, leading to optimized application efficiency.
- Contributed to **frontend** improvements for job management, creating a more intuitive and responsive user experience.
- Technology stack:** Node.js, Express.js, MongoDB, React.js, Tailwind CSS, REST API, JWT, Postman, System Design.

Education

8.21/10 **BTech in Computer Science and Engineering**, Graphic Era Hill University Dehradun | Uttarakhand July '20 - July '24

Relevant Coursework: Data Structures, Algorithms, Networks, OS, Databases, Computer Architecture, Web Technology.

Skills

Languages	C++, C, Java, JavaScript, Python, SQL, Bash, Kafka, OpenAPI, Web Services
Frameworks & Libraries	ReactJS, NodeJS, Spring Boot, MongoDB, ExpressJS, Tailwind CSS, Bootstrap, REST APIs
AI ML & LLM	Large Language Models, Fine Tuning, Prompt Engineering, Model Evaluation, AI Automation
Cloud DevOps & Automation	Google Cloud Platform, BigQuery, CI CD, Docker, Git GitHub, Cloud Automation, Scripting
Certifications & Achievements	Secured World Rank 10 in Shastra Programming Contest 2024 (IIT Madras) CodeChef Div 1

Projects

LLM-Powered Code Review Engine

LLM-Powered Code Review Engine

- Designed and built an end-to-end **AI-powered code review system** using a **custom LLM-based model** to analyze source code for quality, correctness, complexity, and best practices across multiple programming languages.
- Developed a scalable **backend architecture** for model inference and rule-based analysis using **Node.js, Python**, and **REST APIs**, delivering real-time structured feedback and review insights.
- Implemented a modern, responsive **frontend dashboard** using **React, ReactJs, and Tailwind CSS** to visualize code issues, suggestions, complexity metrics, and review summaries.
- Enabled real-time bidirectional communication with **Socket.IO**, allowing live code analysis updates, instant feedback streaming, and low-latency user interactions.
- Containerized the complete system using **Docker**, ensuring consistent deployment of the LLM service, backend APIs, and frontend application while supporting extensibility for new models, languages, and review rules.
- Code:** <https://github.com/18-RAJAT/AI-Code-Reviewer>

SmartInbox AI

AI-Powered Email Management System

- Innovative **chrome browser extension** paired with a React-based web platform using advanced technologies including Spring Boot for seamless integration.
- A seamless integration of **Spring AI with React**, facilitating automated email categorization and smart replies while eliminating the need for manually defined RESTful APIs, enhancing user engagement by **30 %**.
- Built a user-friendly **Chrome extension** and an innovative React web application, streamlining email management processes that decreased user support requests by **25 %** within the first test.
- Code:** <https://github.com/18-RAJAT/SpringAI-InboxAssistant>

Programming Contests

- Candidate Master [1930]** in top **2 %** out of 500K+ users on CodeForces and top **1** in our college
- 6* [2233]** Global Rank **357** out of 100K+ users on CodeChef and top **1** in our college
- Guardian [2518]** in top **1 %** out of 700k+ users on Leetcode and top **50** in India rank
